WORK EXPERIENCE

Web3 Pro

March 2023 – December 2024

*FrontEnd Developer / QA Engineer
California, United States*

Web3 Pro (<https://www.web3pro.com/>) is the first white label Web3 B2B SaaS platform offering companies enterprise-grade applications for marketing, gaming and record authentication.

Since 2017, Web3 Pro has enabled premium brands to achieve increased revenue streams and consumer engagement by monetizing their digital identity through NFTs sold both as authentic collectibles and in-game items (i.e., skins). We provide our clients with the right enterprise-focused trifecta of technology, people, and process to align with their own corporate high standards.

- As a FrontEnd Developer and QA Engineer, I helped create a multi-tenant application for different companies to showcase their brands, allowing multiple clients to buy digital assets (NFTs), and also worked on an administrative platform for said companies to administer their brands and NFTs.
- Our main technologies FrontEnd wise were HTML, CSS, JavaScript, ESNext, TypeScript, React, React Hooks, NPM, NextJS, AntDesign, React Query and Vite.

Dept

June 2022 – February 2023

FrontEnd Developer

Buenos Aires, Argentina

Dept (<https://www.deptagency.com/>) is a pioneering technology and marketing services company that creates end-to-end digital experiences for brands such as Google, KFC, Philips, Audi, Twitch, Patagonia, eBay and more.

- As a FrontEnd Developer, I contributed in the effort to refactor a monolithic-type codebase which served frontend pages with a Ruby on Rails integrated solution to dispatch HTML/CSS pages combined along with React, to a more manageable (and separated) Frontend which just used React/NextJS.

We also worked on the creation of components made with React and Scrivito (<https://www.scrivito.com/>) which allowed to create complex components in which props/states could be managed by non-technical people directly which avoided the process of going through the Development team to get “simple” changes done. With React/Scrivito components alone, it was possible to create a full-fledged web page by someone without a background in software development.

- Our main technologies FrontEnd wise were HTML, CSS, JavaScript, ESNext, TypeScript, React, React Hooks, NPM, NextJS, React Testing Library, Jest, Material UI, SWR and Scrivito.

Ágora
FrontEnd Developer

January 2022 – June 2022
Buenos Aires, Argentina

Ágora (<https://agora.red/>) is a local startup focused on building tools for local wellness-focused vendors like yoga instructors, fitness coaches and nutritionists.

- As a FrontEnd Developer, I helped with multiple features on both our public facing application and on our private back office which only the vendors have access to. I've made multiple features on my own and also help the more Junior developers in the team with their own tasks.
- Our main technologies FrontEnd wise are HTML, CSS, JavaScript, ESNext, TypeScript, React, React Hooks and NPM.

BlockFi, Inc.
FrontEnd Developer / Mobile Developer

October 2019 – January 2022
New York, United States

BlockFi (<https://blockfi.com/>) is a cryptocurrency exchange and wallet that serves individuals and businesses worldwide. It offers an interest-earning account, portfolio-backed loans, crypto trading capabilities among other features.

- As a FrontEnd Developer, I mainly collaborated on the MobileApplication team and on the Auth team. I also worked on trading, dashboard and QA automation teams. It was a great experience as I was able to see it evolve from a small startup to a more established Unicorn-type of company, and I got to work on many different projects and teams with a lot of great people.
- The main technologies I worked with FrontEnd wise were HTML, CSS, JavaScript, ESNext, TypeScript, React, React Hooks, React Native, Android Development, and Webpack.

Phinx Lab
FrontEnd Developer / Mobile Developer

May 2019 – January 2022
Buenos Aires, Argentina

Phinx Lab (<https://www.phinxlab.com/>) is a local software factory in which we worked on in-house projects, on-demand software development for other companies, and staff augmentation for other companies as well.

- As FrontEnd Developer & Mobile Developer I worked on internal libraries that mainly used JavaScript, React & Node, helped to develop applications for local and international companies using Web and Mobile technologies, and worked as a contractor for Blockfi as part of our staff augmentation service.

KPIMetro
Mobile Developer (Internship)

July 2018 – October 2018
Barquisimeto, Venezuela

KPIMetro was a mobile application to measure, see and create different KPIs (Key Performance Indicators) for any project or company that would need it.

- As Mobile Developer I mainly worked with Angular & Ionic to create an Android application to work as a FrontEnd for the multiple KPIs we had on the Backend. It was a common CRUD app with some authentication capabilities and data visualization.

EDUCATION

CADIF1 Software Academy

Technical Degree on Web Development

2018

Barquisimeto, Venezuela

- This was basically an 8-month full time programming bootcamp mainly focused on web development, here we covered the basics of UNIX Systems, HTML, CSS, JavaScript, NodeJS, Angular and Ionic.
- I finished top of my cohort and got to work with the founder of the academy on an internship to get better on the practical side of development.

SKILLS & INTERESTS

- **Skills:** HTML, CSS, JavaScript, React, React Native, Redux, Angular, Ionic, NodeJS, Mobile App Development, NextJS.
- **Interests:** I love to read SciFi books, working out, jogging, cooking, studying foreign languages (Native in Spanish, Proficient in English).
